Abstract (en)

[origin: WO2004093114A1] The invention relates to an electrical device, especially a protective switch, which comprises a switch latch having a control button that can be especially swiveled or displaced and that can be coupled with movable contacts of a contact device. The switch further comprises a jack that is coupled with the control button and that is movably mounted. A jack support is associated with said jack and is movably mounted in the switch latch, said jack support being associated with the trigger element of a trigger. The movability of the jack support can be blocked by an arbitrarily actuated locking element.
