Abstract (en)

[origin: EP1619021A1] Disclosed is a biaxially stretched polylactic acid multilayer film and the use thereof as packaging film. The gist of the biaxially stretched polylactic acid multilayer film resides in the construction wherein a substrate layer (1) of the biaxially stretched film comprised of polylactic acid (A) has been laminated on at least one surface thereof with a coating layer (II) of an aliphatic polyester composition (D) comprised of 97~5% by weight of an aliphatic polyester copolymer (B) having a melting point (Tm) of 80~120°C, a crystallizing temperature (Tc) of 35~75°C and a difference of (Tm)-(Tc) within the range of 35~55°C and comprising an aliphatic or alicyclic dicarboxylic acid component (b1), an aliphatic or alicyclic dihydroxyl compound component (b2) and a difunctional aliphatic hydroxycarboxylic acid component (b3) and 3~95% by weight of a polylactic acid copolymer (C) containing 7~30% by weight of D-lactic acid, a total of the ingredients (B) and (C) being 100% by weight.
