Abstract (en)
[origin: EP1619335A2] The adjustable hinge for a window or door has wings (2,1) to engage the frame and leaf respectively. The leaf and -or door wings can be sectional and relatively moved on the hinge axis. The middle hinge section (3) can have a guide flange (5) which engages in a guide slot (11) in one hinge wing (12). The flange has an angled groove (5) to receive a sliding lug (14) on the wing, to allow the latter to be adjusted with respect to the rest of the hinge.
