Abstract (en)
[origin: EP1619343A2] A system of aluminium framed door and window panels for buildings characterized by a perimetrical locking capacity, a novel configuration of reinforcing angular members (15, 15') employed in clamping together two sides of the frame or wing sides and provisions for air tightness and heat and sound proof capacity of the panels. The system is provided in either a compact version or a heat insulation enhanced version being obtained by division of the frame profile member (1) and of the wing profile member (2) in two parts being interconnected by means of a polyamide profile member (32a,32b). The wing profile member (2) comprises a channel (4) with dimensions sufficient for the reception of sequentially engaged linear rod members (21) and angular rod members (22) being provided with a plurality of locking pins (24) with a mushroom configuration engaged within corresponding receiving members (23) mounted at the frame profile member (1).
