## Abstract (en)

The assembly has an elastic strap (9) that opposes articulation movement of lamellae (1, 2) of a rolling shutter beyond a position in which the lamellae are coplanar. The elastic strap is housed in a groove (7) of the lamella (1) and is placed with respect to a main wall of the lamella (2), beyond the groove. The strap includes a hemmed edge and is plated against an edge wall (10) of the groove. An independent claim is also included for a roller-blind comprising a rolling shutter including a lamellae assembly.
