Abstract (en)
[origin: EP1619448A1] The present invention relates to a ventilation apparatus (1) for recirculating or freshening air in a space. This ventilation apparatus (1) comprises a housing (2) with air displacing means (3), an air inlet (10) into the housing (2) for the purpose of supplying air, and a substantially downward and laterally oriented air outlet out of the housing and into the space for emitting a recirculated or freshening airflow, characterized in that the air inlet (10) is laterally oriented relative to the housing (2) and is in open connection with the air displacing means in the housing via a channel arranged over the air displacing means (3).
