Abstract (en)  
[origin: EP1619631A1] When an access entitlement is read as valid, a blocking member (1) is placed in an open position. To detect the presence of a wheelchair (15) or pram, a sensor is arranged near the blocking member. The sensor controls an actuator for moving the blocking member from the open position to the closed position, only after the wheelchair or pram has left its detection area.
