Abstract (en)

[origin: WO2004046465A2] Disclosed is a device for temporarily erecting a flood protection line, comprising individual angled elements (WE) that can be disposed in a row along a flood protection line. The front face (VS) of the individual angled element (WE) forms a damming wall while the rear face (RS) thereof forms a supporting wall. The bottom face of the individual angled element (WE) can be placed on a base along the flood protection line.
