Abstract (en)

[origin: WO2004099586A1] A control valve comprises a movable flap (15) for a controlled closing or opening of a fluid passage (9, 3), wherein in the closed state the upstream side of said flap (15) extends in a plane being inclined to the extension direction of the passage (9, 3). Such a control valve is used in a turbine housing or compressor housing of a turbocharger.
