Abstract (en)  
[origin: WO2004100589A2] The invention relates to a method for transmitting data via a data transmission channel (CH2) in a communications network (CN). Said transmission channel is made available for the wireless transmission between a transmitter (S) and a receiver (R). The inventive method is characterized in that data transmission is carried out while taking into consideration the channel quality in such a manner that the channel quality data available during transmission are as current as possible and no unnecessary transmission of channel quality data is required.
