Abstract (en)  
A breathable sock comprises at least one portion (2a) of fabric, positioned at the toes, which is looser-woven than the main body (1a) of the sock (1). Other portions (2a, 2b, 2c) of loose-woven fabric allow an increase in the advantages deriving from use of the sock (1) described herein. In particular, they are preferably positioned on both the upper part (1b) and on the lower part (1c) of the sock (1), at the sole of the foot and close to the instep.
