Abstract (en)
On the upper side (28) of the handle surface layer (20), virtually parallel to the longitudinal axis (11a) strips are molded. Near these, to the sides, there are recesses (37) which penetrate from the upper side to the underside (30). Recesses are made between longitudinal strips (42) as a hole (38) penetrating the long axis. Holes form a straight-line row along the axis. Further dispositions and forms of penetrating holes are described.
