Abstract (en)
[origin: US2006022098A1] The invention relates to a system of a support element and at least two functional elements which can be used in the sanitary sector, with the support element being able to be coupled to each of the functional elements via a system interface and the system interface having a spigot-shaped element-at the support element side-with an outwardly biased latch element projecting out of said spigot-shaped element transversely to its longitudinal axis and the functional elements each having a tubular element corresponding to the spigot-shaped element and having a cut-out for the latch element.
