Abstract (en)

[origin: EP1621294A2] The power driven tool (2) is equipped with a head (6) at the front of the housing (4) holding the rotating disk (10). A D-shaped handle (14, 16, 18) is attached to a semispherical bearing element (12) which can be rotated around a longitudinal axle (B) in order to adjust the position of the handle (14) to the particular task. The curved segment (18) of the handle (14) can be released by pressing a button and additionally moved along a complementary path (P) located inside the semispherical element (12) adjusting its level of inclination.
