Abstract (en)

[origin: WO2004074151A1] The invention relates to a printing machine comprising at least one guiding element (308, 501, 710, 720, 720') transversally extending in a transport direction for guiding a strip on a line which is fitted with air-permeable micro-orifices on the surface thereof interacting with said strip. The invention is characterised in that the guiding element (712) associated to the same single strip and inclined at an angle of 45 DEG or 135 DEG with respect to a feed direction, and a folding cone (732) associated to the same single strip are provided with said air-permeable micro-orifices in the area of interaction with the strip
