Abstract (en)

[origin: EP1621505A1] The device has an information display at a floor of a building and another display in a car. A control unit operates the former display to indicate an arrival time of the car at the floor and operates the latter display to indicate its arrival time at a destination floor. The unit includes a planning control (2) that determines the estimated arrival time and an elevator installation control that determines the actual time. An independent claim is also included for a method of informing passengers of an elevator installation in a building.
