Abstract (en)

The car (2) or counterweight (3) are suspended on at least two carrier belts (6), and each belt is connected via at least one deflection roller to the car or counterweight. Each deflection roller is built into its own deflection roller unit (10) for one carrier belt. Each carrier belt is connected to the car or counterweight via the respective deflection roller unit. An independent claim is included for a method of installing suspension devices in a lift system.
