Abstract (en)
The lock has a latch (2) whose head includes a pivotable latch segment (10), which is supported in an area of a latch bevel. The latch segment has a sliding cam (15) with a curved sliding surface (16) that is perpendicular to a guidance surface (14) of a guidance recess (5). The guidance surface withdraws the latch movement in open position such that the sliding surface exhibits an unwinding effect at the guidance surface.
