Abstract (en)
[origin: WO2004065065A1] The invention relates to a multiple clamping device for clamping a plurality of pieces. The multiple clamping device comprises a base (1), at least one stationary jaw (4) disposed on the base (1) and a plurality of adjustable jaws (5) that are displaceably guided between two lateral cheeks (2, 3) of the base (1) and that can be linked with the base (1) in a positively locking manner by means of a mating toothed section (11) that can be engaged with an inner lateral toothed section (10) on a lateral cheek (2). The mating toothed section (11) is disposed on a sliding element (12), displaceable between a lifted release position and a lowered position of engagement, and the clamping jaws (5) have a clamping device (18, 19) each for mutually bracing the two lateral cheeks (2, 3) for clamping the sliding element (12) between the lateral cheeks (2, 3) in the position of engagement, thereby allowing for a rapid and simple positioning of the adjustable cheeks.
