Abstract (en)  
[origin: WO2004099502A1] A rail system comprising an elongate ducting trough (22) located, for example, generally centrally along a swept path (20). The ducting trough (22) comprises a plurality of trough sections, each defining a pair of channels (24, 26) for housing electrical cables (not shown). The system further comprises a pair of rails (34) positioned, for example, on either side of the ducting trough (22) and running substantially parallel thereto. The rails (34) and the ducting trough (22) are substantially in the same plane and/or at substantially the same level.
