Abstract (en)
The pillar has sections (4, 5) with flanges having fixing units allowing a connection between an inner side of the flange of the section (4) and an outer side of the flange of the section (5) to fix the sections on width of front sides (3). The units have two U shaped parts open outwards from ends of the respective flanges, where a center distance between legs of one of the parts is equal to length of a bridge of the other part. An independent claim is also included for a storage system having a rectangular pillar.
