Abstract (en)
The invention relates to a modular scaffold system (1), in which the posts (2) are provided with rosettes (3) approximately every 500 mm for coupling a horizontal tube shaped joist element (4, 12) onto it and according to the invention the stroke height H of the scaffold is approximately 3000 mm and the anchorage pattern (9) onto the exterior wall of the engineering structure per storey in horizontal sense is not constructed at every position of each post, in which in order to make this possible per storey in the modular scaffold system (1), specially recessed stiffened diagonals (13) are mounted in frame work shape, in which, for the mason (15) of the exterior wall (11) in horizontal and in vertical sense adjustable specific brackets (10) and a small attachment scaffold (14) are applied, through which in a surprisingly way the legal lifting standards for the mason (15) can be met every time.
