Abstract (en)
A refrigeration apparatus (1) is described, which is fitted with a refrigerated water distributor (6) supplied by a hydraulic circuit (4,12) adapted to be connected to a water supply, this being external to the apparatus, typically the public drinking water supply; the apparatus comprises a first solenoid valve (12) being located in the hydraulic circuit, a second solenoid valve (63) being located in the distributor, and an electronic control system (13); the electronic control system (13) is adapted to actuate the solenoid valves (12,63) so as to control the water flow in the circuit and the water flow in the distributor, as well as to determine the quantity of water flown.
