Abstract (en)  
[origin: EP1624528A2] Contacting of each conductor is carried out by contacting element, slidably located, orthogonally to supply line, in insulating housing and penetrating insulation or screen of line. Head of contacting element includes circular rotation counterbearing (7) for feed rotation cylinder (5) in insulating housing with thread (4,6).Contacting element is fitted non-rotatably in insulating housing, but rotatably coupled to counterbearing in pressure and tension resistant manner in displacement direction of contacting element.
