Abstract (en)

[origin: WO2004098854A2] The invention relates to a lining comprising a face (19) covering a layer of foam (7), and a sealing skirt (25) which is to be flattened by the foam as it expands against the walls (11) of a foam receiving cavity (9) formed in a supporting framework (3). The covering face (19) is defined by a peripheral contour (21) and at least partially extends past said contour due to the sealing skirt (25). Said lining has an inner surface (28) which is to face towards the foam (7). The inner surface (28) of the lining (5) has at least one raised section (27). The inventive lining can be applied, for example, to the dashboard of a motor vehicle.
