Abstract (en)

[origin: WO2004101267A1] The device comprises: a path for at least a first ply (V1), and a path for at least a second ply (V3); along the path of said first ply, a guide roller (3) of said first ply (V1); a motorized cylinder (5) provided with protuberances (5P), associated to said guide roller (3) and around which the path of said first ply extends; a glue applicator (7) cooperating with said cylinder (5); a pressure roller (9) cooperating with said cylinder (5). The guide roller (3) is motorized and has at least a first operating position wherein it does not press against the cylinder. The peripheral speeds of the guide roller (3) and of the cylinder (5) are controllable so as to tension the first ply fed around the cylinder.
