Abstract (en)
[origin: US2006266727A1] The invention relates to a closure for closing a bottle having a bottleneck (1) with an opening on which bottleneck an outer thread (5,6) is formed in the vicinity of the opening. In order to provide a closure that is easy to handle and can be fabricated inexpensively, the closure (2) has at least one, and particularly several, deformation regions which are plastically deformed so that in the outer peripheral surface of the closure they form indentations (21,22) and internally (25,26) they are adapted to the thread (5,6).
