Abstract (en)  
[origin: WO2004103845A2] The invention relates to a beaker-type packaging container (1) consisting of at least one plastic material and comprising a coupling device (8), which permits, if necessary, the removable attachment of a sealing lid (13). Said coupling device (8) consists of coupling elements (9, 10) for a non-positive and positive fit, which co-operate with the counterpart coupling elements (16, 17) of a sealing lid (13). The invention also relates to a sealing device (51) composed of plastic for a container (52) that is configured with a protuberant edge (54), in addition to a packaging container (101) for foodstuffs, whose casing (103) forms ribs (135) that are arranged around the periphery of said packaging container (101).  
[origin: WO2004103845A2] The plastics tub (1), especially for packaging foodstuffs, has a body in the shape of a beaker with a coupling structure (8) at the upper rim of the beaker mantle (2) for a sealing lid (13) to be fitted and removed. The coupling has shapes (9,10) giving a force and a positive fit with complementary shapes (16,17) at the lid.
