Abstract (en)  
[origin: WO2004103851A1] A package for articles (1), particularly for air-conditioning apparatuses of substantially parallelepipedal shape comprises: a polymer film (3) with air bubbles (4), each of the air bubbles (4) having a predetermined degree of inflation, the polymer film (3) being wrapped around the article (1) along its largest dimension, at least two shells (5) fitted on the two opposed smallest ends of the article (1) which are covered with the polymer film (3), filling elements (4) inserted between the walls of the article (1) that are housed in each shell (5) and the internal side walls of the shell (5), and a film of heat-shrinkable material (8) covering both the air-bubble polymer film (3, 4) wrapped around the article (1) and the shells (5) which are fitted on the ends of the article (1), the heat-shrinkable film (8) being in a thermally contracted condition.
