Abstract (en)

[origin: WO2004099526A1] Disclosed is a fastening device (1) for a panel (2), especially for forming light band systems, comprising a bearing mechanism that is provided with at least one bearing mechanism part (3) which can be mounted on the panel side and at least one bearing mechanism part (4) which can be mounted on the building side. Said bearing mechanism parts (3, 4) allow for engagement at an adjustable angle via engaging sections. The bearing mechanism part (3) that can be mounted on the panel side is disposed at a distance from the distal end while a device (5) used for sealing purposes on the building side is arranged at the distal end.
