Abstract (en)  
[origin: WO2004104460A1] The invention relates to a modular valve system comprising at least one valve housing (40) having rate quantities that are standardised on its opposite ends (38, 42), both on the inner peripheral side and on the outer peripheral side and inside the housing (52), for applying other valve components, such as a valve piston (46), at least one energy accumulator (26), a pilot-controlled element, and at least one fluidic connection, or for fixing the valve embodied in the form of a screw-in cartridge to other components.
