Abstract (en)
[origin: WO2004109611A1] The invention relates to a reliable and rapid registration of articles that are equipped with a barcode and/or an RFID tag at a self-service checkout. Said registration is achieved by the integration of a barcode scanner and an RFID reader into the goods registration zone. To prevent a duplicate registration of articles that are equipped with both a barcode and an RFID tag (transponder), the barcode scanner and the RFID tag are connected to a data processing device, so that if the registration of an article is duplicated, only one price is charged.
