Abstract (en)
[origin: WO2004105392A1] The invention relates to a method for navigation in a list of elements in an audiovisual receiver, comprising a first step of processing and display of a first sub-list of element extracts from a list of element extracts, comprising a first current element displayed graphically. A second processing and display step of a second sub-list of elements follows and is activated when, following introduction of a navigation command, the new current element is located in the first or last position of the first sub-list, the second sub-list displaying the new current element framed by at least two elements. Said displayed elements can be identifiers for digital television services. In one embodiment said elements are identifiers for events broadcast by a television network. The invention further relates to the receiver for selecting services according to the above method.
