Abstract (en)

[origin: EP1625842A1] The device has an underwater jet producing module with nozzles for producing fluid. Main tubes (12, 13) are fixed to a technical block (14) on which the module is mounted. The block permits to supply the corresponding inlets of the module with the fluid, and the position of the module is adjusted by sliding along the main tubes. The block has a pump (141) with its inlet and outlet respectively connected to the tubes (12, 13). An independent claim is also included for a basin equipped with a fluid jet producing device.
