Abstract (en)
[origin: EP1626008A1] Based on a body (1) made from a metal plate with any configuration that is provided at its opening with a peripheral lip (3-3'), to which is attached by heat soldering a film (4) that acts as a lid, on the peripheral lip (3-3') being defined a flange (7) that tends towards a cylindrical configuration, in which the marginal area (9) of said lip (3-3') near its sharp edge (6) is attached by a mechanical union to the initial area of the flange, so that the sharp edge (6) is protected from the effects of the product contained in the can.
