Abstract (en)
[origin: EP1626150A2] The arrangement has a door with a firm side and a closable wing (31). A gap is provided in the wing (31) where a seal arrangement is transferable into a sealing or an opening condition. The gap in the sealing condition is approximately air-locked and in the opening condition air is released. A seal element is mobile in a crease transverse direction (20, 20a, 20b) and connected to a transverse slider (1). The seal element is connected to the transverse slider by a clip connection.
