Abstract (en)
[origin: EP1626378A2] The container has a control module (10) storing a container break-in information in a memory (14) during detection of break-in of the container or during attempt of the detection by a container break-in detector (18). A WiFi module (15) of the control module is connected with a personal digital assistant (16), a terminal (17) and a local area network (19) in an airport for communicating the break-in information stored in the memory.
