Abstract (en)
[origin: WO2004103109A1] The invention relates to a zipper comprising at least two support strips, provided with a row of coupling members on their longitudinal edges, and at least two slides for opening and closing that can be displaced independently of each other. The zipper comprises at least three support strips (8, 9, 10) and at least two slides (11, 12), whereby every slide (11, 12) is functionally linked with a joint support strip (8) and with an additional support strip (9, 10), only assigned to the respective slide. The slides (11, 12) optionally separate from each other or link the two support strips (9, 10) associated therewith and the common support strip (8).
