Abstract (en)

[origin: WO2004105976A1] Disclosed is a method for producing vehicle parts, particularly shell parts for vehicles, according to which a three-dimensionally preformed semi-finished or finished standard part, especially a standard shell part, is produced for a serially manufactured vehicle type. An individualized part is then produced from the preformed standard part (1) by subsequently embossing a three-dimensional contour (2) into the standard part by means of a spike-type reshaping tool (14) which is pressed against the standard part from one side while being displaced relative to said standard part.
