Abstract (en)

[origin: WO2004102455A1] The invention provides direct and persistent access to digital data, in particular to digital medical data. Based upon the identity of the user (10), a list of relevant medical data is presented to the user (12) by accessing a repository of attributes relating to the digital medical data. In order to generate the list a user profile is consulted (11). The user profile dictates the items within the list on the basis of a rule-based comparison between the user profile and the attributes. The user selects from the list the medical data which should be presented, and the requested medical data is subsequently presented to the user (15).
