Abstract (en)

[origin: WO2004100060A2] An RF reception system including a terminal and a portable object such as a smart card for communicating with the terminal. The system includes an RF receiver for receiving a plurality of data flows from an RF signal. The portable object includes a data storage area. The data storage area includes predetermined data identifying a specific data flow. The system further includes selection means for selecting the specific data flow identified by the predetermined data from the plurality of data flows.
