Abstract (en)
[origin: WO2004105194A2] A communications interface (1) for connecting a communications device to a communications cable has connectors which are matable with co-operating connectors of the communications device. A housing encloses terminals of the interface and has access openings (9) therein via which the communications cable can extend into the housing for connection to the terminals. In preferred forms, a carrier member (100) is releasably securable to the interface (1) and at least one cable clamp component (69,71) for clamping a cable to the interface, or other component for the interface, is releasably secured to the carrier member (100). A component selected for fixing to the interface (1) can be released from the carrier member (100) and fixed to the interface as required.
