Abstract (en)
[origin: FR2849980A1] The method involves transmitting digital flow and complementary information required to view a video sequence. Video flow is reconstructed at a reception site having a decoder (2) with a unit for communicating with a personal computer, and is transmitted to a screen (6). The main flow is received by the computer, and logical application is executed to reconstruct the display flow in the decoder. An Independent claim is also included for a system including a decoder and a personal computer for implementing the video sequence distributing method.
