Abstract (en)  
[origin: EP1627846A2] The shop truck has a load carrier (58) and the piston-cylinder unit (12) to displace it. The piston (16) moves in and out of the cylinder (14) to transmit forced to a moving component (62, 64) of the load carrier. There is at least one diverting force transmission device (26, 28), at least one section of which, but preferably all of it, it lies in the longitudinally extending region of the piston cylinder unit.
