Abstract (en)
[origin: EP1627978A2] The panel comprises two spaced-apart walls (2,3) made of shuttering material, and at least one open ground region (4). The walls and ground region are made of a bendable panel material, especially expanded metal. Concrete-permeable openings are arranged in the ground region. The walls are connected together by struts made of the panel material. An independent claim is included for a method of manufacturing a shuttering panel.
