Abstract (en)
[origin: WO2004105886A2] A trampoline of the type comprising a flexible mat (1), a plurality of resiliently flexible rods (2) each having a lower end retained in a frame (3) of the trampoline and upper end, and a plurality of fittings (6) coupled to the mat about a periphery of the mat and including on or in an underside of each fitting a socket cavity (10) which receives the upper end of a flexible rod so that the upper ends of the flexible rods are pivotally connected to the periphery of the mat, also includes a latch member (15) movable between an open position which enables the upper end of a flexible rod to be engaged into the socket cavity of the fitting to connect the rod and fitting and a locked position in which the latch member locks the upper end of the rod in the socket cavity.
