Abstract (en)

[origin: WO2004104106A1] The invention relates to a formulation and method for the production of a receptacle or a pot or a cup which is biodegradable and which is generally used in agriculture and more particularly used in gardening and horticulture. According to the invention, the description of the formula and the technical production method includes a mixture of materials whose intrinsic characteristics and values enable the pot or cup or receptacle which is biodegradable to be produced and processed. The invention relates to a formula and method for the production of a receptacle or pot or cup which is biodegradable (1) and is made of a textile vegetable fiber or wood fiber (2) of a vegetable and/or animal fatty material (3) from a bio-plastic material arising from a natural vegetable and/or animal substance (4) and demineralized water (5). Said pot or receptacle or cup is highly biodegradable and can be easily integrated and mixed in order to promote fermentation of organic and mineral residues, is used for improving farmland, forming compost after composting has occurred.
