Abstract (en)
[origin: WO2004104332A1] The present invention relates to a handle element for a compartment partly enclosed by compartment walls having edges facing frontward, said compartment having an opening facing frontward and a door for selectively opening and closing said opening being movably attached to said cabinet. Said handle element has pivotally supported means (10) and being attached to said door, said handle also having abutting means (11) by which the door can be is physically forced towards a position at which said compartment is being open. The handle element comprises locking means (17) in order to enable for the element to be operated in at least two different modes, in which the abutting means (11) in a locked mode is hindered from being able to physically move said door and in an open mode is being able to physically move said door. The handle element also comprises at least one magnetic element (21).
