Abstract (en)

[origin: WO2004109144A1] The invention relates to a cylinder lift detection device for compressed-air disk brakes, said device comprising a sensor (2) for detecting the cylinder lift, a power source for feeding the sensor, an actuating device (4) which is mounted between the sensor (2) and the power source and is used to switch on the sensor, and a functional display (6) that is connected to the sensor (2) and displays the operative or defective state of the brakes.
