Abstract (en)  
[origin: WO2004104502A1] The invention relates to a door for a refrigeration device comprising an external wall (8), an internal wall (9) and a thermally insulating layer (10) that is sandwiched between said walls. The external wall (8) is divided into a section (11) that is covered by a decorative panel (5) and a section (4) that remains exposed. The covered section and exposed section can be connected in two parts and at the level of an undercut edge (3).
